Ideation Phase – Empathize & Discover

Empathy Map Canvas

Date	08 March 2026
Team ID	[Your Team ID]
Project Name	Predictive Pulse – Hypertension Risk Detection using Machine Learning
Maximum Marks	4 Marks

User Persona: Raj – 35-year-old working professional concerned about blood pressure and overall health.

THINK & FEEL **(What really matters, worries & aspirations)**	**HEAR** **(What friends, boss, influencers say)**
• Worried about increasing blood pressure due to stress and lifestyle • Wants an easy way to check health risks quickly • Thinks technology and AI can help in early disease detection • Feels regular hospital visits are time-consuming • Wants to stay healthy and prevent serious heart problems • Believes early detection can improve long-term health outcomes	• Doctors advise regular blood pressure monitoring • Family members suggest maintaining a healthy lifestyle • Friends discuss fitness apps and digital health tools • Influencers promote healthy living and preventive healthcare • Media highlights increasing cases of hypertension in young adults
SAY & DO **(Attitude in public, behavior, actions)**	**SEE** **(Environment, friends, market offers)**
• Searches Google for symptoms like headache, dizziness, and high BP • Uses health apps or fitness trackers to monitor health • Visits hospitals occasionally for blood pressure checkups • Talks with friends about stress and lifestyle problems • Looks for online tools that can predict health risks quickly	• Sees many health tracking apps but few AI prediction tools • Notices increasing awareness about digital healthcare technologies • Observes wearable devices monitoring health metrics • Sees AI being used in healthcare diagnosis and prediction • Environment includes frequent use of smartphones and internet for health information
PAIN **(Fears, frustrations, obstacles)**	**GAIN** **(Wants, needs, measures of success)**
• Difficulty identifying hypertension risk early • Medical checkups require time and hospital visits • Lack of easy tools that analyze symptoms quickly • Confusion caused by too much generic health information online • Fear of serious complications if hypertension is not detected early	• Instant prediction of hypertension risk using AI • Simple web application for entering health details • Clear medical advice and lifestyle recommendations • Early detection to prevent serious cardiovascular diseases • Easy and accessible healthcare technology available anytime
