Ideation Phase

Brainstorm & Idea Prioritization Template

Date	08 March 2026
Team ID	[Your Team ID]
Project Name	Predictive Pulse: Harnessing Machine Learning for Blood Pressure Analysis
Maximum Marks	4 Marks

Step-1: Problem Statement

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A person concerned about their blood pressure	Check whether my blood pressure indicates hypertension risk	Medical checkups require hospital visits and can take time	There is no simple AI system that predicts risk instantly	Worried and uncertain about my health
PS-2	A patient experiencing symptoms like headaches or dizziness	Understand if my symptoms are related to hypertension	Online information is confusing and not personalized	There is no AI based system that analyzes symptoms and gives risk prediction	Anxious and unsure about what to do

Step-2: Brainstorm – Idea Listing and Grouping

Category	Ideas Generated
Machine Learning	Train a Logistic Regression model to predict hypertension stage based on symptoms and patient data
Data Processing	Encode categorical medical inputs such as age group, symptoms, and medication history
Web Application	Create a Flask web application where users can enter health details and receive predictions
User Interface	Develop a clean medical dashboard using HTML and CSS for easy form input
Prediction System	Display hypertension stage with confidence score and color-coded risk level
Medical Recommendations	Provide lifestyle advice and health recommendations based on predicted stage
Deployment	Run locally using Flask or deploy online using platforms like Render or Railway

Step-3: Idea Prioritization (Importance vs Feasibility)

Idea	Importance (1-5)	Feasibility (1-5)	Priority
Machine Learning model for hypertension prediction	5	4	HIGH – Core component
Flask web application for prediction interface	5	5	HIGH – Required for user interaction
Medical recommendation system	4	4	HIGH – Improves usefulness of prediction

Clean HTML/CSS medical dashboard	3	5	MEDIUM – Improves user experience
Confidence score display	3	4	MEDIUM – Helpful for interpretation
Visualization dashboards	3	2	LOW – Future enhancement
