Ideation Phase

Define the Problem Statements

Date	08 March 2026
Team ID	—
Project Name	Predictive Pulse: Harnessing Machine Learning for Blood Pressure Analysis
Maximum Marks	2 Marks

A well-articulated customer problem statement helps identify the real challenges faced by users and guides the development of an effective AI-based healthcare solution.

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A person concerned about their blood pressure health	Check whether my symptoms indicate hypertension risk	Medical diagnosis usually requires hospital visits and tests	There is no simple AI-based system that quickly analyzes symptoms and predicts risk	Worried and uncertain about my health condition
PS-2	A patient experiencing symptoms like headaches, dizziness, or nosebleeds	Understand if these symptoms are related to hypertension	Online information is confusing and not personalized	Most health websites provide general information instead of personalized risk analysis	Anxious and unsure about the seriousness of my symptoms
PS-3	A healthcare student or developer interested in medical AI	Build a machine learning system that predicts hypertension stages	Medical datasets and prediction models are difficult to implement	There are limited beginner-friendly projects combining ML models with web applications	Confused and lacking practical implementation guidance

How Might We (HMW) Statements:

#	How Might We Statement
HMW-1	How might we build an AI-powered system that predicts hypertension risk using patient health information and symptoms?
HMW-2	How might we design a simple web application where users can enter health details and receive instant medical risk predictions?
HMW-3	How might we provide clear medical recommendations and lifestyle advice based on predicted hypertension stages?
