| **Project Name** | Predictive Pulse: Harnessing Machine Learning for Blood Pressure Analysis |
| **Maximum Marks** | 4 Marks |

### User Persona: Raj – 35-year-old working professional concerned about blood pressure and overall health.

| **THINK & FEEL**<br>**(What really matters, worries & aspirations)** | **HEAR**<br>**(What friends, boss, influencers say)** |
|---|---|
| • Worried about increasing blood pressure due to stress and lifestyle<br>• Wants an easy way to check health risks quickly<br>• Thinks technology and AI can help in early disease detection<br>• Feels regular hospital visits are time-consuming<br>• Wants to stay healthy and prevent serious heart problems<br>• Believes early detection can improve long-term health outcomes | • Doctors advise regular blood pressure monitoring<br>• Family members suggest maintaining a healthy lifestyle<br>• Friends discuss fitness apps and digital health tools<br>• Influencers promote healthy living and preventive healthcare<br>• Media highlights increasing cases of hypertension in young adults |
| **SAY & DO**<br>**(Attitude in public, behavior, actions)** | **SEE**<br>**(Environment, friends, market offers)** |
| • Searches Google for symptoms like headache, dizziness, and high BP<br>• Uses health apps or fitness trackers to monitor health<br>• Visits hospitals occasionally for blood pressure checkups<br>• Talks with friends about stress and lifestyle problems<br>• Looks for online tools that can predict health risks quickly | • Sees many health tracking apps but few AI prediction tools<br>• Notices increasing awareness about digital healthcare technologies<br>• Observes wearable devices monitoring health metrics<br>• Sees AI being used in healthcare diagnosis and prediction<br>• Environment includes frequent use of smartphones and internet for health information |
| **PAIN**<br>**(Fears, frustrations, obstacles)** | **GAIN**<br>**(Wants, needs, measures of success)** |
| • Difficulty identifying hypertension risk early<br>• Medical checkups require time and hospital visits<br>• Lack of easy tools that analyze symptoms quickly<br>• Confusion caused by too much generic health information online<br>• Fear of serious complications if hypertension is not detected early | • Instant prediction of hypertension risk using AI<br>• Simple web application for entering health details<br>• Clear medical advice and lifestyle recommendations<br>• Early detection to prevent serious cardiovascular diseases<br>• Easy and accessible healthcare technology available anytime |
