Project Name	Predictive Pulse: Harnessing Machine Learning for Blood Pressure Analysis
Maximum Marks	4 Marks

Scenario: User uses the Predictive Pulse web application to check hypertension risk and receive health recommendations.

Phase	Entice	Enter	Engage	Exit	Extend
Steps	User becomes concerned about blood pressure symptoms such as headache or dizziness and searches online for health assessment tools	User opens the Predictive Pulse web application and sees a health assessment form	User enters health information such as age group, symptoms, blood pressure levels, and medication history	System displays predicted hypertension stage along with risk level and medical advice	User follows the healt recommendations an may revisit the tool to monitor health condition
Interactions	User finds the tool through Google search or healthcare awareness platforms	User accesses the application through a web browser without requiring login	User interacts with the health assessment form and submits data for prediction	The system processes input using machine learning and shows prediction results	User shares the tool with others or uses it again for future health monitoring
Goals & Motivations	Find a reliable digital tool to quickly check hypertension risk	Start using the health prediction system easily without complicated setup	Receive accurate health risk prediction based on symptoms and health parameters	Understand the health condition and take preventive actions	Maintain better health awareness and prevent serious cardiovascular diseases
Positive Moments	User discovers an AI-based healthcare tool for quick health assessment	Clean and simple user interface makes it easy to understand	System provides instant prediction and clear medical advice	User gains awareness about hypertension risk and preventive steps	User feels more confident about managing health and monitoring blood pressure
Negative Moments	User may not know which symptoms indicate hypertension risk	First-time users may need guidance on entering health parameters	Incorrect or incomplete inputs may affect prediction accuracy	User may misunderstand results without medical knowledge	Lack of advanced features like health history tracking or wearable integration
Opportunities	Promote the application through healthcare awareness campaigns and educational platforms	Add introductory instructions explaining how to use the tool	Improve user interface and add interactive health tips	Provide downloadable health reports or doctor consultation suggestions	Add mobile app support, wearable device integration, and health tracking features
